## SANITARY INSTRUCTIONS TO ALL OWASIPPE CAMPS

Hospitals

1 - Sufficient orderlies to be supplied to aid doctor to keep hospital clean and in order.
2 - Instruments and supplies to be kept in order and as free as possible from dust.
3 - Instruments not in use preferably kept dry, except a lifter which may be kept in a Lysol (creason) solution.
4 - Stove and lantern to be kept clean and filled in preparation for any emergency.

Kitchen

1 - Floor, wall and shelves to be kept scrupulously clean by cook with as frequent scrubbings as necessary.
2 - Empty milk cans to be scalded out with boiling water and turned upside down, in sun preferably.

Commissary and Mess Hall

1 - Clean, neat and orderly at all times.
2 - Tables to be scrubbed after each meal.
3 - Dishes to be washed immediately after each meal.
4 - Handle dishes on their outer surfaces; do not stick fingers inside in handling.
5 - Place dishes on shelves or on table, bottom side up, and keep covered from dust with cloths which will be provided.
6 - All food, garbage and cans containing food must be kept from flies by suitable screening.
7 - Prepared foods may be thus protected by covering with muslin until served.
8 - Milk, meat and butter must be in ice box at all times. Eggs must be in ice box if not consumed within 48 hours after arrival. Perishable vegetables must be in icebox
9 - No food that is eaten raw, such as butter, fresh vegetables, prepared dishes, (also meat) may be placed directly upon the ice which is from the lakes and contaminated; not where it will lie in the melted ice, nor beneath the drippings from the ice.
10 - Perishable food, such as bread, must be elevated above the floor.

Garbage enclosure

1 - Must be completely screened from flies.
2 - All garbage and cans that contain food must be inside enclosures (or in box for cans.)
3 - Floor to be kept clean by frequent scrubbing.
4 - Yards kept clean and everything orderly.

Water supply and drains

1 - Cesspools and privies should be 200 feet away from water used for cooking, drinking or bathing, and if possible should be on lower level.
2 - All drains must be kept open - closed drains to be reported to G.H.Q.
3 - Grease traps to be emptied weekly of grease.

Latrines

1 - Cleaned daily, including sweeping and scrubbing with disinfectant. Scrubbing must be done every other day, and had best be done daily. This includes floor, seats, covers and inside drop tubes.
2 - Urinals must be washed out daily, and the drain cleaned out as many times as necessary.
3 - Agitation should be done only by the sanitary detail who shall be required to do it once in the morning and once in the evening. At that time it should be done thoroughly.
4 - Caution must be used not to splash any one. Vinegar must be placed in each latrine for immediate application if any splashing occurs.
5 - Keep latrines fly proof and covers down. A few hours respite may start an epidemic of food poisoning.
6 - Entering toilets with bare feet subjects the Scout to possible serious infection.
7 - Lanterns, preferably red, must indicate latrines at night; it is well to be so arranged that the light shines inside.
